

Streamdata.io Releases API Gallery On Its New Website

JANUARY 2018

STAMFORD, CT – [Streamdata.io](https://streamdata.io) announced today the release of the API Gallery as part of its new website.

The API Gallery is a gallery of publicly available APIs that have been tested by Streamdata.io to evaluate the gap in efficiency between streaming and polling. After performing tests, metrics and results are published, including bandwidth savings and server CPU savings.

“Our goal with the API Gallery is to provide people interested in our service with data and facts allowing them to evaluate the impact streaming can have for them, and make an educated choice. They even have the option to submit an API for us to test.” said Eric Horesnyi, C.E.O. of Streamdata.io.

Displaying about 15 APIs for the launch, the API Gallery will evolve over time, not only increasing the number of APIs tested and available for reference, but also providing more metrics from the tests.

The API Gallery can be found at www.streamdata.io/developers/api-gallery

About Streamdata.io:

Streamdata.io is a B2B software vendor making real-time data accessible to all by operating a proxy turning any APIs into an event-driven streaming API.

With use-cases ranging from monetizing API, enhancing UX with animated interfaces, feeding machine-learning systems, distributing information more efficiently on mobiles to optimizing API costs, Streamdata.io solution offers multiple level of benefits while being extremely scalable and secure.
