Streamdata.io: New White Paper explores the Open Banking standard in UK

MARCH 2018

STAMFORD, CT – Streamdata.io announced today the release of a white paper that explores the Open Banking standard in the United Kingdom

There has been a lot of chatter regarding the Payment Services Directive2 (PSD2) in Europe this year, as the January 2018 deadline rolled around.

While many banks are still trying to put an API strategy in place, an organization in the UK has been rolling out APIs for their top banks. While the results of the effort won't be known for some time, the work out of the Open Banking Implementation Entity, provides the technically strongest strategy for delivering APIs across Europe, and for that matter, anywhere in the world to date.

With this white paper, Streamdata.io wants to share the result of its research and help advance the API conversation with banks and fintech companies

To download a complimentary copy of the white paper, visit https://streamdata.io/resource-library/blueprint-open-banking-standards-uk.

About Streamdata.io:
Streamdata.io is a B2B software vendor making real-time data accessible to all by operating a proxy turning any APIs into an event-driven streaming API.
With use-cases ranging from monetizing API, enhancing UX with animated interfaces, feeding machine-learning systems, distributing information more efficiently on mobiles to optimizing API costs, Streamdata.io solution offers multiple level of benefits while being extremely scalable and secure.
